AWS Resource Setup – Install VSCode and connect to Instance
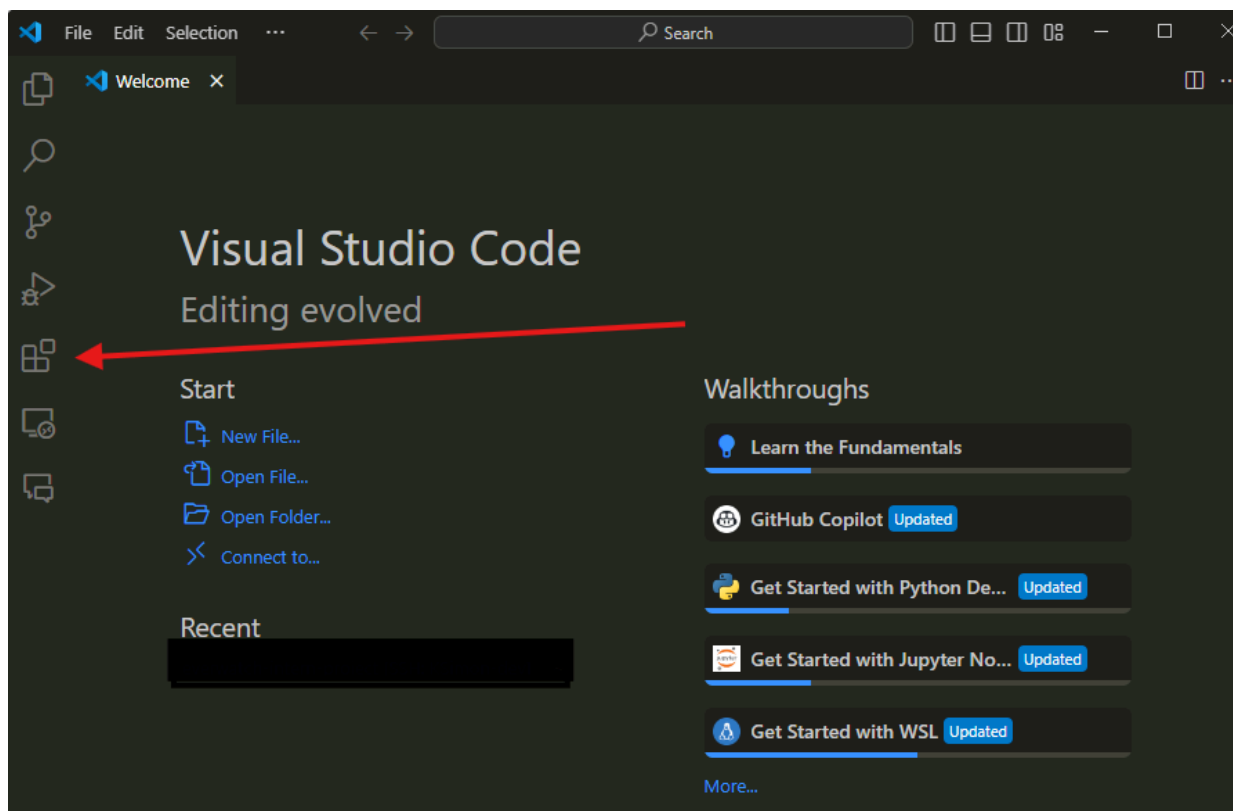

Download/Install VSCode

Go to: [Download Visual Studio Code - Mac, Linux, Windows](#)
Download and install appropriate version for your OS
Run the application.
You'll be prompted by a welcome screen, navigate the left toolbar and select extensions

In the extensions menu, search for "Remote Desktop"
Select: Remote Development and install

Configuring and Connecting to EC2 Instance

1. Press: ctrl+shift+p
2. Type and select:
3. Select: {your path}/.ssh/config
4. In file input:

```
Host {first initial last name}-dev
HostName {your hostname}
        *hostname retrievable in AWS Connect to instance > SSH Client> "...Public DNS"
User ubuntu
IdentityFile path\to\identity_key.pem
```

5. Save config file and exit.

6. To Connect
   a. Select Remote Explorer on the left bar sidebar
   b. Select correct SSH Connection from list of options and click connect
